

2T2-102.2

AKA: *August Type 2*

Pick-up Points:

- The appearance of clash evidence identifies the 2T2-102.2

Obverse

- Die scratch (NW to SE in orientation): a small die scratch in the field just of the front of Ike's chin; die scratch may be harder to detect in later die stages, and only present on the 2T2-102, and not the 2T2-101
- Very small spread DDO (seen in 1, and the first T in TRUST, N, G, R in the motto). It is easier to detect this DDO in earlier die states
- 2T2-101 N die gouge "pimple" and the 2T2-101 die scratches are NOT present
- Die clashes: near the end of, or just after EDS, the dies clashed; none are more than grade B or C; the Talon Head clash is most consistent, usually accompanied by a thin Volunteer clash
- Remnants of an Upside Down U and Hair Lip can also be found

Reverse

- Type 2 earth
- A very small spread DDR - seen in the AR, stars 13 and 12, and the R in AMERICA; easier to detect in earlier die states
- The 2T2-101 STATE die crack is NOT present
- Die abrasion scratches: die repair work evidence (scratches oriented SSW to NNE) is present in the Jaw Line clash area to the right of the moon, extending up to the first "U" in UNUM
- Die abrasion work appears along with the clashes on the obverse, and like the obverse clashes the reverse die abrasion work does not appear in EDS examples exemplified by the 2T2-102.1
